TECHNICAL PROJECTS

REAL ESTATE LISTINGS PLATFORM | WEBSITE

Github

A Real Estate Project that allows users to create Real estate properties that allows one to upload the properties together with images. Before uploading to the public for viewing, the user is expected to pay a small fee which is implemented with Daraja API. Features implemented include: pagination, filtering, wishlisting, admin privileges to operate listings.

Technologies used

- Django and Python
- AWS S3 for Images
- Bootstrap CSS

BOOTCAMP API IN NODEJS | WEBSITE API

Github August 2020, Nairobi KE

- A Nodejs REST API that allows a user to create, update and delete a Bootcamp. Lists all bootcamps in a database: filter by fields, limit fields, pagination, select specific fields in result
- The project consumes the dog api from dog ceo

DOG SEARCH ENGINE- GOOGLE CLONE | WEBSITE

Github Web May 2019, Nairobi KE

- A search engine like google but for dog images built as an implementation of Fetch API. The project allows a user to perform a search query on available on any dog breed and displays random 3 images. Each search produces new images..
- The project consumes the dog api from dog ceo

TEKULCHA WEBSITE | WEBSITE

Web Github November 2019 | Nairobi, KE

- Website built in reactjs for a new startup, created a good UI and UX for the startup, smooth scroll using react
- Implemented Components in React, used javascript higher order functions and utilized third party APIs for typeform for capturing contact information
